No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 44

Number 1, February 1978

C. I. Reich and J. Zorzópulos. *Boophilus microplus:* Characterization of Larval Proteases 1

L. E. A. Symons and W. O. Jones. Protein Metabolism. 5. *Trichostrongylus colubriformis:* Changes of Host Body Mass and Protein Synthesis in Guinea Pigs with Light to Heavy Infections 7

P. V. Cherian and D. G. Dusanic. *Trypanosoma lewisi:* Ultrastructural Observations of Surface Antigen Movement Induced by Antibody 14

E. R. Pfefferkorn. *Toxoplasma gondii:* The Enzymic Defect of a Mutant Resistant to 5-Fluorodeoxyuridine 26

K. E. Hoagland and G. A. Schad. *Necator americanus* and *Ancylostoma duodenale:* Life History Parameters and Epidemiological Implications of Two Sympatric Hookworms of Humans 36

C. I. Reich, J. M. Grillo Torrado, A. Pérez Arrieta, and J. Zorzópulos. *Boophilus microplus:* Strain Differences of the Cholinesterase System. 50

Gary W. Long and Donald G. Dusanic. *Trypanosoma lewisi:* Effects of Immunosuppression on the Serological Reactivities of Exoantigens and Cellular Antigens of Bloodstream Parasites 56

Michael A. Casey and John P. Harley. *Trichinella spiralis:* Skeletal Muscle Potentials in Infected and Uninfected Mice 66

Thakor R. Patel and Bruce A. McFadden. *Caenorhabditis elegans* and *Ascaris suum:* Fragmentation of Isocitrate Lyase in Crude Extracts .. 72

Tan Takayanagi, Misako Takayanagi, Yoshisada Yabu, and Hirotsugu Kato. *Trypanosoma gambiense:* Immune Responses of Neonatal Rats Receiving Antibodies from the Female 82

W. O. Jones and L. E. A. Symons. Protein Metabolism. 6. *Trichostrongylus colubriformis:* Skeletal Muscle Protein Catabolism in Primary and Secondary Infections of the Guinea Pig 92

Leon W. Bone, H. H. Shorey, and Lyle K. Gatson. *Nippostrongylus brasiliensis:* Factors Influencing Movement of Males toward a Female Pheromone 100

P. B. Conway-Jones and A. H. Rothman. *Hymenolepis microstoma:* Tegumentary Disks 108

Bruce M. Christensen. *Dirofilaria immitis:* Effect on the Longevity of *Aedes trivittatus* 116

Sue Carlisle and Lawrence S. Weisberg. *Schistosoma mansoni:* Tracer Studies in Mice 124

J. Alexander and R. S. Phillips. *Leishmania mexicana* and *L. tropica:* Inhibition of Growth in Mice by Concurrent Infections of *Trypanosoma brucei* 136

Acknowledgments 143

Announcements 144

Number 2, April 1978

Yuzo Takahashi and Irwin W. Sherman. *Plasmodium lophurae:* Cationized Ferritin Staining, an Electron Microscope Cytochemical Method for Differentiating Malarial Parasite and Host Cell Membranes 145

Alan C. Fusco. *Spirocamallanus cricotus* (Nematoda): Isoelectric Focusing and Spectrophotometric Characterization of Its Hemoglobin and that of Its Piscine Host, *Micropogonias undulatus* 155

C. A. Hopkins, L. M. Law, and L. T. Threadgold. *Schistocephalus solidus:* Pinocytosis by the Plerocercoid Tegument 161

Michael Paul T. Gillett and Vera C. Carvalho. *Schistosoma mansoni:* A Comparative Study of Plasma and Erythrocyte Lipid Alterations in the Experimentally Infected Mouse and in Selected Human Patients. 173

David I. Grove and Richard H. Civil. *Trichinella spiralis:* Effects on the Host–Parasite Relationship in Mice of BCG (Attenuated *Mycobacterium bovis*) 181

Jannet L. Baldwin, Allen K. Berntzen, and Bruce W. Brown. *Mesocestoides corti:* Cation Concentration in Calcareous Corpuscles of Tetrathyridia Grown *in Vitro* 190

Bruce T. Wellde and Carter L. Diggs. *Plasmodium berghei:* Biological Variation in Immune Serum-Treated Mice 197

Christine E. Clayton. *Trypanosoma brucei:* Influence of Host Strain and Parasite Antigenic Type on Infections in Mice 202

Dickson D. Despommier, Michael Sukhdeo, and Eugene Meerovitch. *Trichinella spiralis:* Site Selection by the Larva during the Enteral Phase of Infection in Mice 209

A. M. Deelder, D. P. Van Dalen, and J. G. Van Egmond. *Schistosoma mansoni:* Microfluorometric Determination of Circulating Anodic Antigen and Antigen–Antibody Complexes in Infected Hamster Serum 216

J. T. M. Neilson. *Dipetalonema viteae:* Isoelectric Focusing and Immunochemical Studies on Somatic Extracts of Adult Worms and Microfilariae 225

G. R. Rajasekariah and M. J. Howell. *Fasciola hepatica:* Role of Developmental Stages in the Rat's Resistance to Challenge 233

S. K. Martin, L. H. Miller, M. M. Nijhout, and R. Carter. *Plasmodium gallinaceum:* Induction of Male Gametocyte Exflagellation by Phosphodiesterase Inhibitors 239

Rubén López-Revilla and Rodolfo Gómez. *Entamoeba histolytica, E. invadens,* and *E. moshkovskii:* Fluctuations of DNA Content of Axenic Trophozoites 243

Christine A. Facer, Elizabeth A. Molland, A. B. Gray, and G. C. Jenkins. *Trypanosoma brucei:* Renal Pathology in Rabbits 249

Thakor R. Patel and Bruce A. McFadden. *Caenorhabditis elegans* and *Ascaris suum:* Inhibition of Isocitrate Lyase by Itaconate 262

Author Index for Volume 44 269

The Subject Index for Volume 44 will appear in the December 1978 issue as part of a cumulative index for the year 1978.

Experimental Parasitology

Instructions to Authors

Experimental Parasitology publishes research papers on the experimental forefront of parasitology and significant reviews of all aspects of parasitism. There are no page charges; fifty gratis reprints of each article are provided. Research papers are not solicited but should be submitted to the editors. Reviews may be submitted or invited; before preparing an unsolicited review, inquiry should be made and an outline of the manuscript should be submitted. All manuscripts and editorial correspondence may be addressed to the editor or associate editors, whose names and addresses appear facing the inside front cover. Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper. In addition, it is understood that any person cited as a source of personal communications has approved such citation; written authorization concerning such consent may be required at the Editor's discretion. Signed articles and other material published in *Experimental Parasitology* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Language. The Journal publishes in French, German, Spanish, and English. Whichever the language, it should be used idiomatically.

Copies. Manuscripts should be submitted in triplicate, typed with double-spaced lines and wide margins on standard size white paper (about 21.5 × 28 cm).

Title. If possible, the specific designation of the parasite, followed by a colon, should precede the rest of the title. The common or scientific name of the host should appear at the end of the title (e.g., *Ascaris suum* and *Phocanema decipiens*: Cross Immunity in Orally Infected Pigs and Rats). For review manuscripts, the title, as described above, should be preceded by the heading, in capital letters: A REVIEW.

Credits and Disclaimers. Avoid footnotes. Disclaimers, funding support, and other circumstantial information should be included in the *Acknowledgments* section.

Authors and Their Addresses. The full professional mailing addresses of all authors must be included with their names. When co-authors are at different institutions, the different addresses should follow each author's name. Only if a change of address has occurred, should a footnote be used to indicate the author's present address. The manuscript title and the author's name and address should be the only material appearing on page 1 of the manuscript.

Publication Dates. The date on which a manuscript is accepted will be inserted after the author's name and address.

Form. Following the title and author page (page 1), each research manuscript should contain the following sections and headings: *Abstract, Index Descriptors, Introduction, Materials and Methods, Results, Discussion, Acknowledgments* (if any), *References.* Pages should be numbered consecutively from the title–author page through the references. Departure from this format should be justified in a separate letter. The format for reviews is identical with that for experimental papers up to and including the *Introduction.* The body of the review should be divided in a manner appropriate to the subject matter. Acknowledgments (if any) and references should follow the body of the review and the pagination should be continuous. Long reviews may have an *Outline* between the *Index Descriptors* and *Introduction.*

Abstract. The abstract must be factual (not indicative).

Index Descriptors. A list of key words and phrases should follow the abstract. They should reflect the contents of the paper accurately and help to describe it to scientific nonexpert

readers. The taxonomic designations of all organisms discussed in a manuscript must be included. Larger taxonomic categories should also be mentioned (e.g., in a paper on *Watsonius watsoni*, the term "trematode" should appear as an index descriptor).

References. Literature is to be cited in the text by the author's surname and date (e.g., Glaser and Stoll 1940), not by number. The reference list should be arranged first alphabetically by name and secondarily by date. Each reference should consist of the names of all authors, the date of publication, the exact title, the full name (do not abbreviate) of the journal, the volume, and the inclusive pages as in the following examples.

TALIAFERRO, W. H., AND TALIAFERRO, L. G. 1922. The resistance of different hosts to experimental trypanosome infections with special reference to a new method of measuring the resistance. *American Journal of Hygiene* 2, 264–319.

STAUBER, L. A. 1970. Leishmanias. *In* "Immunity to Parasitic Animals" (Jackson, G. J., Herman, R., and Singer, I., Eds.), Vol. 2, pp. 739–765. Appleton-Century-Crofts, New York.

Illustrations. One copy of each figure should be submitted as a glossy photographic print or as the original drawing with the best copy of the manuscript. Tables must be typed. If adequate for reviewers' perception, photoduplicated copies of figures may accompany the two other copies of the manuscript. A number should be given to figures, tables, or illustration legends, but not to the pages on which they appear. Place only one table on a sheet of paper. When illustrations refer to parasite or host, the name of the organism should be spelled out completely at least once in each table heading or figure legend.

Special Nomenclature, Abbreviations, etc. Consult the biology editor's style manual [Council of Biology Editors' Committee on Form and Style. 1972. "CBE Style Manual" (3rd ed.). American Institute of Biological Sciences (3900 Wisconsin Avenue, N.W., Washington, D.C., 20016, U.S.A.)] for the principles of overall style and such details as appropriate abbreviations.

Whenever electron microscopy is the subject of reporting the accepted unit is the micrometer, μm. The magnification of all electron and light micrographs should be indicated by a bar on the print.

Whenever enzymes are the subject of reporting, the Enzyme Commission (EC) number must be used for accurate identification and retrieval purposes in the text, summary, and index descriptors; EC numbers may be found in: International Union of Pure and Applied Chemistry and International Union of Biochemistry. 1972. "Enzyme Nomenclature Recommendations" (American Elsevier Publishing Co., 52 Vanderbilt Ave., New York N.Y. 10017, U.S.A.).

Proofs. Galleys proofs will be sent to the author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty reprints of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the galley proofs.
